THIRTY-EIGHT NEW COVID-19 CASES REPORTED IN JACKSON COUNTY *Region 5 COVID Resurgence Mitigation Measures Remain in Effect*

JCHD was notified in the past 24 hours of thirty-eight Jackson County residents confirmed to have contracted COVID-19. The individuals are as follows:

- Female –one pre-teen, two teens, eight in their twenties, five in their thirties, two in their forties, one in her fifties, three in their sixties, one in her eighties, one in her nineties;
- Male – one teen, five in their twenties, two in their thirties, two in their forties, one in his fifties, and three in their sixties.

158 active cases are currently being managed. To date, there have been 1,595 confirmed cases in the county, including 26 related deaths. Ten individuals were released from isolation, in accordance with CDC guidelines, bringing the total released to 1,411 individuals.

If you have a fever, cough, difficulty breathing, fatigue, muscle aches, loss of taste or smell, nausea, diarrhea, or other symptoms, call your health care provider for further guidance. Two providers are conducting COVID-19 testing of eligible individuals in Jackson County: Call either Southern Illinois Healthcare (SIH) at 844-988-7800; or Shawnee Health Service at 618-519-9200.

Due to sustained regional test positivity rates over 8%, on October 22 Governor Pritzker and the Illinois Department of Public Health (IDPH) implemented COVID-19 resurgence mitigations for Region 5. The test positivity rate (7-day rolling average) for the 20-county region, which includes Jackson County, has remained at 8.3% or higher since October 14. The initial mitigation period is for 14 days, after which, based upon data, the State will decide to end mitigations, keep them the same, or expand them. After the initial period, if the regional, rolling test positivity rate comes down to 6.5% or lower for three consecutive days, then the need for regional mitigation measures will cease.

Jackson County's test positivity rate (7-day rolling average) is now above 8%, as of last report date. On October 13, the county's rate was 4.5 %, and on October 23 it was 8.4%. In addition, last week Jackson County had the third-highest daily average of new cases (16.29) since the pandemic began.

Six of the eleven regions in Illinois are now under, or going into, additional mitigation measures. For more information visit www.dph.illinois.gov/regionmetrics.
